Functional elegance in nursing care

memoriana 2

Room concept for dementia patients –
accessory solutions

memoriana 2 – accessory solutions for sensoric stimulation

With memoriana, wissner-bosserhoff has developed a room concept which is tailored to the special needs of dementia patients and provides nursing staff with great support in their routine. The success of memoriana underlines the growing demand for adequate furnishing solutions.

For memoriana 2, the innovative advancement of the successful room concept, the focus was not only on reducing the strain in nursing but above all on easing the emotional stress for those affected. The concrete implementation of new findings in maieutics and basal stimulation were essential starting points here. Part of this is the integration of sensoric stimulation with adventure panels and food and sensoric bars as well as door memory boxes which can be individually filled to help the residents find their room.

Adventure panel

Mod. No. 70-0114

- Subjects: Woods or city
